The LEAD Academy will select a small group of early-career physicians demonstrating high potential as future leaders to engage in its training program. LEAD Attendings are committing to attending in-person sessions for 12 months and leading an NYP-prioritized project that will extend a further 6 months. The 18-month training program provides LEAD Attendings with the highest-yield components of an MBA and MHA, with additional teaching tailored to individual interests, all led by experts from nationally renowned educational institutions. The program is anchored by NYP-prioritized capstone projects, each led by a LEAD attending with support from their NYP leadership mentors and corresponding medical school leadership mentors.
